

Digital Technology and Culture 375

Language, Texts and Technology

Washington State University, spring 2010

Assignments due for: **March 24, 2010**

<http://ltspring2010.blogspot.com/>

[] **Prompt 3: Share with classmates via our Google group a piece of remediation that you find fascinating for some reason.** This post should include a single sentence description of the piece, followed by a direct URL link to it, followed by an analysis of the remediation (*500 words minimum*) on why it is relevant and important to the discussions we have been having in this class and what questions it raises about issues in this digital era. ***Please bring to this discussion a new piece of remediation that we have not looked at yet in class.***

[] **Continue work on your Research Showcase project.** Your research should stick closely to the plan you created, in order to not fall behind schedule. Remember to update your plan as you go -- not necessarily deleting anything, because those changes are good learning opportunities, but updating the document as new aspects of the project emerge. By this point, your background research should be complete; your instruments should be designed, and you should be ready to conduct your experiments. ***Plan on conducting your experiments and analyzing your data no later than the week of March 24-31.***

Reading:

Jan Baetens, pp. 187-208 of your course pack.
